Renin (active) ELISA

DRG ELISA Renin (active)

The worldwide first ELISA for the measurement of active Renin

Intended use:

Quantitative in vitro diagnostic measurement of active Renin in human EDTA plasma and serum. Renin measurement can be helpful in diagnosis and treatment of certain types of hypertension.

Summary and explanation of the test:

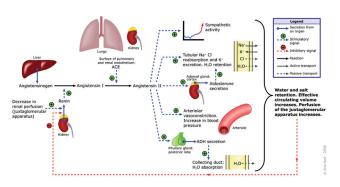

Renin is a protein (Mw of 37 kDa) that belongs to the aspartic acid proteinase family of enzymes. Renin regulates the mean arterial blood pressure of the human body by cleavage of angiotensinogen into the precursor peptide angiotensin-1, which ultimately is processed by angiotension converting enzyme (ACE) to the active octapeptide angiotensin-2. Renin is produced constitutively as prorenin (inactive precursor with 386 amino acids) in the juxtaglomerular cells of the kidney. In response to low blood pressure, low sodium chloride, or activity of the sympathetic nervous system, active renin can be released either from a depot in the kidney or generated from prorenin by cleavage of 46 amino acids of the N-Terminus of prorenin.The blood concentration of prorenin is approx. 10-fold higher than active renin.

Clinical relevance

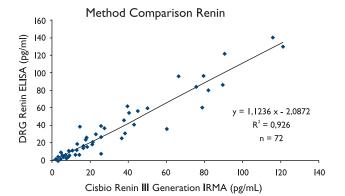

- Differential diagnosis of hyperaldosteronism
- Diagnosis of isolated deficit in mineral corticoides
- Detection of Renin producing tumors (kidney and lung cancer)
- Diagnosis of malignant hypertonia (high blood pressure)
- Monitoring of glucocorticoid therapy
- · Detection of physiological increase during pregnancy

Renin (active) assay characteristics:

- · Assay Principle: Sandwich ELISA
- Dynamic Range: 0.8-128 pg/mL of active Renin
- Total Assay Time: 3.25 hours
- Sample Volume: 50 µl of EDTA plasma or serum
- Cross-reactivity with Prorenin: 0.69%
- Mean Intra Assay Precision: 5.6%
- Mean Inter Assay Precision: 6.8%
- Analytical Sensitivity: 0.8 pg/mL

Renin-Angiotensin-Aldosterone system

Renin (active) ELISA

Principle of the test

The DRG active Renin ELISA Kit is a solid phase enzymelinked immunosorbent assay (ELISA) based on the sandwich principle.

The microtiter wells are coated with a monoclonal (mouse) antibody directed towards a unique antigenic site of the Renin molecule. An aliquot of patient sample containing endogenous active Renin is incubated in the coated well with assay buffer. After incubation the unbound conjugate is washed

Example of Typical Standard Curve

Standard		Optical Units (450 nm)
Standard 0	(0 pg/mL)	0.09
Standard I	(4 pg/mL)	0.19
Standard 2	(16 pg/mL)	0.44
Standard 3	(32 pg/mL)	0.78
Standard 4	(64 pg/mL)	1.14
Standard 5	(128 pg/mL)	2.48

Reproducibility

Intra Assay

The within assay variability is shown below:

Sample	n	Mean (pg/mL)	CV (%)
I	20	44.0	4.2
2	20	27.0	3.9
3	20	9.1	8.7

Inter Assay

The between assay variability is shown below:

	,	,	
Sample	n	Mean (pg/mL)	CV (%)
I	12	19.0	8.9
2	12	36.2	6.3
3	12	66.7	5.2

Expected normal values

The normal value range is 2.5-36.9 pg/mL (supine), 2.7-49.3 pg/mL (upright).

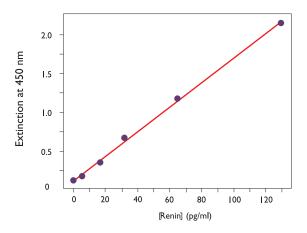

Assay Dynamic Range

The dynamic range of the DRG acitve Renin ELISA is between 0.8-128 pg/mL.

off, and the wells are incubated with Enzyme Complex which is an anti-Renin antibody conjugated with horseradish peroxidase.

The amount of bound peroxidase is proportional to the concentration of active Renin in the sample.

Having added the substrate solution, the intensity of colour developed is proportional to the concentration of active Renin in the patient sample.

Linearity

	Sample I	Sample 2	Sample 3
Concentration (pg/mL)	45.2	53.2	126.0
Average Recovery (%)	101.7	02.8	98.5
Banna of Bannan (%) from	96.7	95.6	94.9
Range of Recovery (%) $\frac{1000}{10}$	108.6	4.6	100.8

Recovery

	Sample I	Sample 2	Sample 3
Concentration (pg/mL)	16.0	16.7	40.2
Average Recovery (%)	96.6	92.9	95. I
Banas of Bassing (%) from	86.8	86.0	87.9
Range of Recovery (%) $\frac{1000}{10}$	105.3	105.5	101.4

Specificity

The cross reactivity with Prorenin is 0.69 %.

Sensitivity

The analytical sensitivity of the DRG active Renin ELISA is 0.8 pg/mL.

ELISAS that perform

DRG develops and manufactures diagnostic ELISA test kits for use in clinical and research laboratories. The experience of our production and management team guarantees to provide high quality products, competitive prices and excellent customer service.

DRG works to DIN EN ISO 9001:2000, ISO 13485:2003 and ISO 13485:2003 under CMDCAS standard, certified by TÜV Rheinland Product Safety GmbH, an indication of our commitment to customer service, quality control and improved health care.
