More than 50 Years of Innovative Diagnostics

The DRG Group is a leading manufacturer of immunoassay test systems for clinical diagnostics and research with distribution partners in over 120 countries. DRG is also the manufacturer of the DRG:HYBRID-XL®, a fully automated analyzer for immunoassays and clinical chemistry.

Founded in 1970, DRG International, Inc. provides a complete range of products and services to the diagnostic and research communities. DRG International's headquarters is conveniently situated in Springfield, New Jersey, USA.

DRG Instruments, Marburg

The German division, DRG Instruments GmbH, was established in 1973 and is located in Marburg. Since 1990, DRG Instruments develops and manufactures innovative immunoassays, both for routine and research applications. With the expansion of DRG in the early nineties, further subsidiaries were founded in Poland, Russia, Czech Republic. DRG is an ISO 13485 certified company and operates in accordance the FDA 21 CFR 820 Quality System Regulation.

BioCheck

BioCheck acquired DRG International

BioCheck, Inc., the parent company of DRG, is in California, USA and was founded in April 1997.

BioCheck designs, develops, and manufactures high-quality *in vitro* diagnostic immunoassay devices for the worldwide biomedical, pharmaceutical, and scientific research markets. BioCheck is also a leading antibodies supplier for life science research. The company holds exclusive market licenses for GFAP and UCH-L1 antibodies in Traumatic Brain Injury application. These antibodies were raw materials for the first FDA-approved TBI test in 2018, demonstrating BioCheck's pivotal role and expertise in brain science.

BioCheck is an ISO 13485 certified and U.S. FDA 21 CFR Part 820 compliant company that provides quality products and is committed to best-in-class customer care.

BioCheck and DRG are committed to providing key valuable diagnostic information to healthcare professionals embracing cutting-edge technologies and methodologies to stay at the forefront of the diagnostic industry. Our continual fostering of automation technologies combined with advanced innovative diagnostic test delivers rapid and critical diagnostics solutions for patient management in hospitals, urgent care centers, reference laboratories and physician office settings around the globe.

Quality

DRG Instruments GmbH has established and applies a quality management system for the following scope:

Design and development, manufacture and distribution of invitro diagnostic test kits used in the diagnosis or detection of transmissible agents and sexually transmissible agents, cancer, prenatal screening, immune status, disease status, autoimmune status, drug of abuse, cardiac markers, protein metabolism, endocrine disorders, compatibility testing, fertility testing, pregnancy testing, therapeutic drug monitoring and the design and development, installation and service of in-vitro diagnostic analyzers.

Evidence was provided that the requirements of **EN ISO 13485:2016** are fulfilled.

We participate in a number of quality assessment schemes, which include Instand (Germany) and RfB, Referenzinstitut für Bioanalytik, Bonn.

DRG products meet the essential requirements of the Directive 98/79/EC of 27. October 1998 on in-vitro diagnostic medical devices.

DRG ELISAS

Simple protocols and room temperature incubations reduce errors and technician time.

Automatable.

Versatile. Compatible with most available equipment.

Added confidence in results.

Assured continuity of supply.

Control of production methods results in economic prices.

- Microtiter Wells - Breakable
- Long shelf life
- Good correlation to RIAs and Mass Spectrometry (MS)
- Direct determination
- Specific
- Convenient and economical
- Easy to use
- Fast
- Sensitive

Abbreviations

1. Assay Type

ELISA (Enzyme-Linked Immuno-Sorbent Assay)

The ELISA (Enzyme Immuno Assay) is heterogeneous, immunological determination of substances in body liquids. The reaction between antigen and specific antibody is assayed by determination of an enzyme which is conjugated to the antigen or antibody. ELISAS may be designed as competitive or sandwich assays. ELISAS are used for the determination of drugs, hormones and proteins and avoid handling of radioactive substances at a similar sensitivity as a RIA.

RIA (RadioImmunoAssay)

This competitive immunoassay is an established method for the determination of very low concentrations of proteins and other substances. The analyte molecules and a constant amount of tracer compete against a specific antibody. Excessive tracer is removed by washing. Comparison of the measured radioactivity with a standard curve allows the determination of the analyte concentration.

IRMA (ImmunoRadioMetricAssay)

Double sided immunoradiometric assay with two antibodies (one in solution the other bound to a solid phase) against different epitopes of the analyte.
